WO 1996-US7171

AB A method for the expression of glycosyltransferase in Aspergillus with increased level of secretion is described. The method consists of expression of a chimeric DNA comprised from 5'-terminus of (1) a signal sequence; (2) a DNA sequence encoding a secreted protein of a filamentous fungi, preferably Aspergillus; (3) a DNA sequence encoding a cleavable linker; and (4) a DNA sequence encoding a glycosyltransferase. Prepn. of a fusion protein consisting of a truncated form of .alpha.-2,3-sialyltransferase and the entire glucoamylase and expression of the fusion protein in Aspergillus niger var. awamori were demonstrated.
